

Our annual maintenance plan for all manufacturers models offers a full system inspection and tune-up that includes:

The **OEM Certified Inspection Service program**, staffed by our specially trained technicians, ensures your cremation equipment is operating at the manufacturers specifications. No longer will you worry about equipment reliability when you need it most.

Annual inspections reduce downtime and predict upcoming maintenance, so you're in control.

Serving all states.
Typical 1- to 2-day service within highlighted area.

Typical inspection and tune-up requires 4 to 8 hours to complete. All work is performed on a Time & Material basis. If additional time is required, customer will be notified. Rates for service are charged portal to portal.

Cremator Refractory Repair

by **Cremation Systems**

Before —

A deteriorating cast hearth and roof in need of repair.

After —

Repairs to roof arch, utilizing Insulating Fire Brick, and installation of Cremation Systems' Quick Change Hearth tiles.

The hearth in a cremation retort “wears” due to high temperatures, chemical attack, thermal shock and exposure to abrasive elements. Cremation Systems' **Quick Change** modular hearth tile system utilizes pre-cast and cured tile specially designed to offer the highest resistance to these adverse conditions.

Hearth replacement with a traditional cast-in-place hearth requires the use of jackhammers, refractory mixers, specialized labor and on-site curing. The **Quick Change** system offers the fastest repair option in the industry. Simply remove the worn and damaged tile and replace.
